ANNUAL REPORT OF THE

PUBLIC PRINTER

FOR THE FISCAL YEAR

ENDED JUNE 30

1909

TRANSMITTED TO CONGRESS DECEMBER 6, 1909

WASHINGTON

GOVERNMENT PRINTING OFFICE

1910

OFFICE OF
THE PUBLIC PRINTER
WASHINGTON

DECEMBER 6, 1909.

SIR: I have the honor to transmit herewith the annual report of the operations of the Government Printing Office for the fiscal year ended June 30, 1909.

Very respectfully,

SAM'L B. DONNELLY,
Public Printer.

The PRESIDENT OF THE SENATE.

ANNUAL REPORT OF THE PUBLIC PRINTER.

OFFICE OF THE PUBLIC PRINTER,
Washington, December 6, 1909.

To the Senate and House of Representatives:

The report of the transactions of the Government Printing Office for the fiscal year ended June 30, 1909, is complete and contains all of the statistical information required by law.

The total appropriations, including the office of the Superintendent of Documents, amounted to $6,206,346.40. The total disbursements amounted to $6,126,790.31, leaving a balance of appropriations unexpended of $79,556.09.

The office earned in repayments the sum of $442,491.46 for printing and binding executed for the several departments and independent offices and paid for from appropriations other than those made specifically for public printing and binding. There is, therefore, left in the Treasury to the credit of the account of the Government Printing Office for the fiscal year the sum of $522,047.55.

The cost to the Government for public printing and binding for the fiscal year, under appropriations for the support of the Government Printing Office, was the total disbursements ($6,126,790.31) less amount of repay work performed by the office ($442,491.46), or $5,684,298.85.

The total charge for work executed was $6,237,483.01. As the total charges exceeded the total disbursements by $110,692.70, and as Congress eliminated the cost of operating the office of the Superintendent of Documents for the fiscal year 1909–10 (estimated at $323,198) as a charge against public printing and binding, an average reduction of 5 per cent was made in the scale of charges, dating from July 1, 1909.

The Government Printing Office received from the sale of waste paper, condemned machinery, for printing speeches and private orders, and other miscellaneous items the sum of $126,873.05, which was deposited in the Treasury to the credit of receipts from miscellaneous sources and is not considered in the totals quoted herein.

Assuming that the expenses of the long session of Congress during the present fiscal year will make it impossible to reduce the cost of maintenance and operation below that of the last fiscal year ($6,126,790.31), and that the repayments collected on June 30, 1910, will be the same as on June 30, 1909 ($340,465.42), the total appropriation for the present fiscal year (1909–10) should be the cost of

operation for the last fiscal year, as stated above, plus the amount expended from appropriations for the present fiscal year on account of the extra session of Congress ($126,531.99), less repayments collected ($340,465.42), or $5,912,856.88. The amount of repayments has, however, fluctuated greatly in past years, and it is a better policy not to consider them in appropriating for the expenses of the Government Printing Office. Eliminating the repayments from consideration, the appropriations for the fiscal year 1909–10 should be as stated in the next paragraph.

The total amount appropriated for the fiscal year 1909–10 was $5,689,088. A deficiency appropriation of $437,702.31 is necessary, plus expenses for the extra session of Congress, paid from appropriations for this fiscal year, amounting to $126,531.99, making a total deficiency appropriation of $564,234.30. The total appropriation for the present fiscal year 1909–10 should therefore have been $6,253,322.30. Although we will perform more than $200,000 worth of "repay" printing for the Census Bureau for the present fiscal year and about $100,000 worth of "repay" printing for the Post-Office Department as a result of the Government Printing Office having been awarded the contract for printing the postal cards, we will undertake to keep the cost of operation and maintenance within this total appropriation of $6,253,322.30.

A limitation of $50,000 for the purchase of new machinery was incorporated in the appropriation for public printing and binding for the present fiscal year, based upon a statement submitted to the Appropriations Committee by the Public Printer. This amount is insufficient. During the past year a complete machinery record has been installed. From this record the total cost of machinery now in use in the Government Printing Office, and the cost of maintenance and the life of the machines, can be obtained. The total cost of the machinery now in use in productive operations was $2,179,539.27. On the basis of the generally accepted trade custom of estimating 10 per cent to represent the depreciation in plant, the amount expended annually for new machinery should be $158,196.18, taking the amount expended in the past ten years ($1,581,961.81) as a basis.

While the expenditure for machinery in the past ten years included a very great sum for the purchase of typesetting machines, it should be borne in mind that typesetting machines rapidly depreciate, that their cost of maintenance is great, and that they may be rendered obsolete at any time by the invention of new devices.

The figures given to us by the courtesy of the executive departments show that the total amount expended for printing and binding by the several departments of the Government performed outside of the Government Printing Office in the year 1908 was approximately $2,073,803.53, of which $1,982,918.35 was expended for work done elsewhere than in Washington. This work could all have been done

in the Government Printing Office without any material increase in the overhead charges of the establishment, and its production therein would enable the Public Printer to further reduce the scale of charges by 5 per cent and provide steady work during the dull season for the large force of printers necessary to perform the work during the sessions of Congress.

In the matter of purchases of material and supplies for the use of the Government Printing Office the interests of the Government are properly safeguarded. Paper is purchased on annual contracts, which are let under the direction of the Joint Committee on Printing. Miscellaneous material and supplies are purchased under annual contract as a result of open competitive bidding. Open-market purchases are restricted to the fewest possible items. In the case of open-market purchases at least three bids or estimates are secured on all items for the furnishing of which there is any competition. An effective and satisfactory system of storekeeping and accounting controls the issuance and use of all materials and supplies.

Attention is being given to the practice of economy in minor items, and during the year, as a result of changes in the lighting system, the lighting load has been materially reduced, and by a slight improvement in the boiler draft the daily consumption of coal has been decreased 2 tons.

The automatic carriers for roll paper and for the finished product, the reinstallation of the pneumatic-tube system, and the construction of a bridge across Jackson alley have greatly improved the facilities for handling work and reduced the charge for nonproductive labor. A fireproof oil-storage house has been constructed and all inflammable oils removed from the buildings and stored therein. The physical layout of the office of the superintendent of documents has been rearranged so that a greater volume of work can be performed without any increase in the number of employees.

The branch printing office in the Treasury Department was abandoned in May, 1909; the branch printing office in the Interior Department in September, 1909; and the branch printing office in the Agriculture Department in November, 1909.

The printing formerly executed in these branch offices is now being produced in the main Government Printing Office in a manner satisfactory to the departments at a saving to the Government of at least an overhead charge incident to the operation of the branch offices.

Labor-saving machines whose merits have been well established were purchased, consisting of a headbanding and lining machine, a tablet-making machine, a tipping-in machine, two automatic press feeders, a waste-cleaning machine, a special half-bound case-making machine capable of handling an unusually wide range of work, and a process for the manufacture of nickel-faced electrotype plates.

ACCOUNTING.

Important changes were made in the financial statements contained in the annual report of this office for the fiscal year 1907–8, and it was stated therein that the report for the fiscal year 1908–9 would contain other important changes, particularly in Tables 4, 5, and 6, as a result of the complete system of accounting which was put in operation at the beginning of that fiscal year. By reference to these statements, which appear on pages 17, 32, and 39, it will be noted that the disbursements are shown in detail under each appropriation, thus making it possible to trace the disbursement for any item or class of items to the appropriation under which the purchase was made. These statements, which are made up from an abstract of the paid vouchers, balance with the financial statement, and thus prove the correctness of the accounting. Balances have not always been shown under past systems of accounting.

Sections 19 and 22 of the printing act of January 12, 1895, which require these and other long tabulations, should be changed, as the tables fail to serve any purpose in safeguarding the expenditures, while in many cases the information contained therein is available in another form. The cost of compiling this bewildering and apparently valueless mass of material is considerable, and it is only to meet what is accepted as the requirement of the law that it has been compiled and incorporated in this report.

Attention is directed to Table No. 8 (page 56), which is a new arrangement of the figures showing the output of the office. This table shows the number of copies of each class of work printed and bound in whole or in part during the fiscal year 1908–9, the total number of printed pages, and the charges for the principal items which make up the cost of the several classes of work. It will be noted that the total charge as shown by this statement under the congressional allotment, as well as for each department and independent office, balances with the total charge shown in Table No. 7 (page 54), and that the charge is shown for each class of work executed in this office and its branches during the fiscal year. This statement meets the requirements of section 22 of the printing act of January 12, 1895, and covers all of the operations of the office, although Tables 11 and 12 (required by section 19 of said act) are also submitted as a part of this report.

COST ACCOUNTING.

The system of keeping the cost of production against individual jobs has been entirely abandoned, the cost of production now being kept against each operation entering into the completed product.

The basis of this cost-accounting system is the division of work shown on the chart, which follows page 12. An account is kept of the

output of each of the sections shown on the chart. Each section is charged with labor and material and the general overhead charge of supervision, the overhead charge including the cost of operation of the buildings division, and the expenses of the office of the Public Printer. This charge is distributed equitably against each section of the division of work. By this method the cost of all operations and of the completed jobs is easily computed.

REDUCTION IN COST OF OPERATION.

In my efforts to reduce the cost of operation in the Government Printing Office I have had the cooperation of the employees. The per capita production has increased appreciably and the overhead charge has been reduced wherever possible. A comparison of the cost of operation in the Government Printing Office with that in the offices of contracting printers operating under as nearly similar conditions as exist in the country is illustrated by bids recently received by the Post-Office Department for the printing of the catalogue for Division of Dead Letters sale, which were as follows per page:

DISTRIBUTION OF PUBLIC DOCUMENTS.

During the year all of the old publications on hand in the office of the Superintendent of Documents have been assorted and catalogued. Such documents and publications as in the opinion of the Superintendent of Documents should no longer be retained in his stock have been listed. This list will be submitted to the Joint Committee on Printing with the request that they authorize the destruction of these useless publications and their sale as waste paper. When this is accomplished the Government Printing Office and the office of the Superintendent of Documents will have been entirely cleared of useless documents and publications.

The accumulation of documents and publications can not in the future be avoided without remedial legislation. Your attention is directed to the report of the Superintendent of Documents (p. 401), in which he refers to the necessity for discrimination in the library distribution and to the present duplication of work. Economy in the printing and distribution of public documents can not be accomplished without radical legislation involving sweeping changes and concentration of duties and authority.

The laws governing public printing and binding should be rearranged, codified, and many conflicting and apparently useless provisions stricken out.

CONSTRUCTION OF PASSAGEWAYS.

The two wings of the Government Printing Office building are connected at the eastern or North Capitol street end; there is no connection at the western end. It is not possible to lay out the workrooms in such a manner as to entirely obviate the necessity of conveying work from one wing to another on every floor of the building, and a bridge connection is necessary between the western end of the two wings on two floors, as shown in plan "A," which follows page 12. Authority to construct these two bridges is requested. The approximate cost will be $2,400.

LUNCH ROOM.

The majority of employees of the Government Printing Office partake of the noonday meal in the workrooms in which they are employed. Food is carried into the workrooms in large quantities and distributed from convenient points. This method is unhealthful and insanitary, increases the difficulty of keeping the office clean, and attracts insects destructive to certain classes of material.

The eighth (or attic) floor of the new building has been unused, except for light storage, owing to the absence of light and air and the arrangement of the steam and water piping and electrical conduits. The steam, water, and electric lines have been moved, leaving a large, valuable floor space, shown on plans "B" and "B–1," which follow page 12.

I request that authority be given me to construct skylights in the roof at an approximate cost of $3,500. By this means ample lunch room will be provided and the employees, particularly those who are detained during the night hours in winter, will be able to secure wholesome refreshments served in a proper manner.

CONSTRUCTION OF NEW BUILDING.

The old buildings of the Government Printing Office, while constituting a great fire risk, can be used to advantage for a period of at least five years. During the summer alterations on the first floor have been completed, and a large portion of that floor will be utilized for the work of printing the postal cards for the Post-Office Department. The buildings are used for shops, paper warehouse, bindery, storehouse, and assorting and shipping rooms for the Superintendent of Documents. It could not be abandoned for the purpose of constructing a new building without seriously interfering with the operations of the office and necessitating the renting of additional quarters.

I respectfully recommend that the yard to the west of the building known as the H Street Annex, shown on plan "C," which follows page 12, be utilized for the construction of a seven-story fireproof factory building, at an approximate cost of $250,000. This will provide ample facilities for the conduct of the business of the Government Printing Office when it becomes necessary to remove the old structures and erect a new building. I am not suggesting that the Government Printing Office will require all of the space that a new building to be erected on the entire site of the old structure would afford, but if that structure consisted of eight stories, four of them could be turned over to the general uses of the Government for storage purposes until such a time as required by the Government Printing Office.

THE PRESERVATION OF PERMANENT RECORDS OF THE GOVERNMENT.

At the present time and for many years the reports of the executive departments and of the Government and the proceedings of Congress have been printed on paper made from wood pulp, the elements entering into which are commonly known to rapidly deteriorate. The Annals of Congress, printed in about the year 1820 upon a rag paper, are in excellent condition, and I recommend that a limited number of copies of the proceedings of Congress and reports of the executive departments, together with those reports in which are recorded the scientific achievements of the day and the advances in government and education, be printed upon a good quality of rag paper, for preservation in the Congressional Library, the Public Documents Library, and the libraries of the Senate and House of Representatives, and a limited number of the larger depository libraries of the country. This subject

has been referred to in previous reports of the Public Printer. An officer of the Government Printing Office has carefully investigated the condition of records of ancient times. He has secured an exhibit consisting of large sections of linen fabric in almost perfect state of preservation and containing legible hieroglyphics that were placed thereon approximately three thousand five hundred years ago. His investigation conclusively shows that the records of the Government can be preserved in a permanent manner by the printing of an edition of ten or twelve copies of all important records upon unbleached linen fabric.

MEDICAL AND SANITARY REPORT.

Attention is directed to Tables Nos. 24 and 25, which show the number of surgical and urgent medical cases treated in the Emergency Room of the Government Printing Office, the number of employees quarantined, and the number who received compensation under the Government Employee's Liability Act. These tables are taken from the report of the medical and sanitary officer.

The prompt treatment and antiseptic measures taken to prevent wounds from being poisoned or infected after they are received, with resulting relief from pain or septicæmia (blood poisoning), serves to reduce the amount of payments for compensation under the Liability Act, relieves suffering, and saves the loss of the services of the injured employee.

Respectfully submitted.

FIFTEENTH ANNUAL REPORT OF THE SUPERINTENDENT OF DOCUMENTS, FOR THE FISCAL YEAR ENDED JUNE 30, 1909.

GOVERNMENT PRINTING OFFICE,
OFFICE OF SUPERINTENDENT OF DOCUMENTS,
Washington, D. C., November 9, 1909.

SIR: In accordance with the provisions of section 61 of the general printing act, approved January 12, 1895, I have the honor to submit the Fifteenth Annual Report of the Superintendent of Documents, covering the period from July 1, 1908, to June 30, 1909.

The following tables present a statistical statement of the receipts and disbursements of moneys during the fiscal year 1909, and a statement of the receipts and shipments of public documents during that period, and comparative data for previous years.

Having assumed this position on July 16, 1909, its operations during the period covered by this report were not under my direction, and I have to report conditions as shown by the books of the office. It is but justice to my predecessor to state that I found an organization quite perfect and a system that evidently is the result of intelligent thought and well-directed effort. The duties of the Superintendent of Documents have repeatedly, in the annual reports of that official, been enumerated in detail. I will follow precedent by so doing:

1. To sell at cost any public document in his charge, the distribution of which is not specifically directed in the law.
2. To receive from any Government office any document published for sale, which sale must be made under the provisions of section 61.
3. To have general supervision of the distribution of all public documents (with exceptions enumerated).
4. To prepare at the close of each regular session of Congress a comprehensive index (document catalogue) of public documents.
5. To prepare and print in one volume a consolidated index (document index) of congressional documents.
6. To index such single volumes of documents as the Joint Committee on Printing shall direct.
7. To receive all accumulations of documents from the several executive departments, bureaus, and offices of the Government, and annually to take over their surplus for distribution or sale.
8. To prepare and publish a monthly catalogue of government publications, which shall show the documents printed during a month, where obtainable, and the price thereof.
9. To thoroughly investigate the condition of the designated depositories.
10. To distribute the documents as issued to the designated depositories.

To the above, prescribed by law, practice has added the following:

1. Answering letters of inquiry relative to what the Government has printed on certain subjects, and quoting the prices of the books

containing the desired information, if they are in stock, or directing the inquirer to the nearest library where our statistics show it should be obtainable for reference.

2. Receiving the surplus accumulations of the libraries, and supplying them in exchange with publications desired.

3. Exchanging with Members of Congress in order to obtain for sale publications of which our stock is exhausted, and at the same time supply them with books they can distribute and relieve them of those which are of little or no use to them.

Upon assuming charge of this office I found as a legacy an accumulation of public documents, numbering something like 1,200,000 copies. It had been received from libraries all over the country, from departments and bureaus, and from the document rooms of the Capitol, and loomed up before me a most formidable proposition, inasmuch as in a comparatively short time a report was to be laid before you indicating what of this immense aggregation was worth retaining as stock and what I would recommend for condemnation. The work of assorting this printed matter is practically completed, and I shall lay before you a detailed report, indicating what disposition of same I recommend should be made. This report, in accordance with your desire, will reach you before Congress meets.

The organization of this division has repeatedly been stated in detail by my predecessor, and probably you do not care to have me do so again. Sufficient to say that as I found it, it substantially exists to-day, for it seems to me well adapted to the purposes in view. These purposes in the main may be said to aim at a distribution of public documents so they may reach those whom they will interest, and to give opportunity to persons who desire to purchase them to do so at cost. It is my personal opinion that there is printed at the Government Printing Office hardly anything that would not be gladly welcomed by an appreciative reader, provided the latter connects with the publication while it is up to date. Even the enormous accumulation to which I have heretofore alluded is the result of faulty distribution rather than a lack of popular appreciation of what issues from the nation's printing house.

Certain changes in the printing laws seem to me not only advisable but imperatively necessary in order to carry out the intent of the law establishing this office, with due regard to economy. At present depository libraries are compelled to receive and care for all publications emanating from the Government Printing Office intended for general distribution. A moment's reflection will show that there should be a certain discretion given which would permit smaller libraries to avail themselves only of the receipt of such publications as they could reasonably care for. Again, libraries in the larger cities would probably welcome many publications that in other localities would be of less interest, while on the other hand libraries located in agricultural communities prefer a class of literature that is of far less interest to the residents of cities. At present the whole number of publications is shipped to all alike. Were libraries given discretion to designate, say once or twice a year, the class of publications they desire, or the class they did not desire, a far less number might suffice, such discretion making for economy in several respects. First, it would lessen the cost of production; second, it would lessen

the labor of this office in shipping; third, it would be no longer an unwelcomed burden thrust upon the unwilling recipients, who must now furnish room for that which their patrons rarely if ever consult; fourth, it would in a large measure lessen the amount of printed matter that now is returned to this office by the libraries from time to time as no longer desired.

Another provision of the printing laws which now restricts the sale of a publication by permitting but one copy to a customer should also be repealed as not operating as originally intended. It is a provision readily evaded and therefore inoperative.

One of the defects of the present methods of distributing public documents is the duplication resulting from the fact that various departments and bureaus have mailing lists of their own. Let all such mailing lists be turned over to the Superintendent of Documents, and let the mailing be done by his office. This will still leave to departments and bureaus the designation of recipients, but enables the superintendent to detect and prevent duplication.

Another provision of law that imposes a great amount of labor on this office is the requirement of a detailed statement each year of the number sold of each separate publication. It in no wise guards the public treasury, it is of no general interest, and the information thus conveyed can readily be obtained by an inspection of the books of this office, instead of page after page of printed matter, which has taken many weeks to compile. My predecessors have frequently expressed the opinion here laid down, but no change has ever been made that would do away with this useless requirement.

This is not the time nor is my report the proper medium through which to lay before you for your consideration a draft of the law as it affects this office that in my judgment would work the best results. With your permission I shall hereafter lay before you such a draft. My aim is—it is hardly necessary to assure you— to work out the full intent of the legislation underlying the establishment of this office with the greatest economy that may be feasible without impairing results. I earnestly believe that such economy can be practiced, and it goes without saying that it should be my duty to bring this to your attention.

In submitting this report it is but justice to note the faithful services given by the people employed in this division. A number of them have been connected with it since this office has been created, and almost without exception they seem to be imbued with an esprit de corps that makes for the best results. This has made my work very agreeable, and I deem it just to embrace this occasion by expressing my deep appreciation of the assistance that has been given me by the competent and energetic assistant superintendent, Mr. Alton P. Tisdel.

Respectfully submitted.

AUGUST DONATH,
Superintendent of Documents.

HON. SAMUEL B. DONNELLY,
Public Printer.
